SOLARIS Solar Table

Smart Phone / Tablet charging station

The solar table combines the latest in PV Solar, Lithium-ion and anti-wobble (fluid locking & adjustment) technology in a compact robust table frame. The table top is made from toughened glass for extra safety and durability. Whether you are an “eco-conscious” consumer, business executive or student, we offer sunlight energy that is captured and stored for power-on-demand top up of smartphones and tablet devices.

Other low power DC devices (for instance wi-fi repeaters) can also be powered by the Lithium-ion battery backup located inside the table.

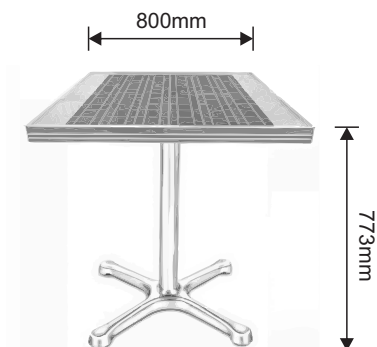

coffee shops
public spaces
hotels
university campus
restaurants

Features:

- Toughened glass table top 800 x 800mm.
- Anti-wobble, fluid locking & adjustment aluminium table base.
- Continuous charging 45Wp Solar Power.
- Battery backup for day/night time charging. <100 Wh (Lithium Ion). Tablet draws 10W/h, Smart phone draws 5W/h.
- Charging ports: USB socket = Smartphone, USB cigarette lighter socket / car charger = Tablet.
- Battery low - voltage cut-off protection.

Optional extra:

- LED service light (illuminates table when service/attention is required from waitron).
- Branding panel on top of table top, low tack vinyl decal: 2 panels L800mm x W110mm.
- Branding panel etched into table top glass. Laser/sand carving: 2 panels L800mm x W110mm.
